MR MOHAMEDSOEB AHMEDNASHIRWALA

Java Developer

CERTIFICATES, EDUCATION AND TRAINING

- Bachelor of Engineering, Babaria Institute of Technology, Computer Engineer, Gujarat, INDIA
- IT specialist for application development at CGI ISMC Pvt. LTD, INDIA - Jul 2013 – PRESENT
- Looking out for a remote opportunity

SUMMARY

With more than 13 years in the information technology industry, MOHAMEDSOEB has wide range of experience providing client communication, development, production support, documentation, coding, code refactor, unit testing and implementation of business technology solutions with good knowledge on Software development life cycle.

Always a keen learner, team player and a sound self-starter, exposure to new domains shall be looked upon as an opportunity to gain considerable expertise in a new field. Possess good communication skills, ability to handle & perform under complex pressure situations.

Experience of working in geographically distributed Agile Teams and trade-offs that come with it. Hands on with configuration management, branching strategies, Git, Subversion, JIRA, Change Traceability Methods, Wiki based knowledge management.

WORK EXPERIENCE

CGI ISMC Pvt. LTD, Senior Java Developer

Jul 2013 – present

- Spring MVC, Spring boot (microservices), EJB 3.0
- Java/J2EE, Shell Script, SQL/PLSQL, Junit
- REST (microservice, Hystrix, Eureka) webservice development
- Linux, Docker, kubernetes, Amazon Web Service (AWS)
- Maven, Jenkins
- XML, JSON, SVN, Git, SonarQuebe, VeraCode
- jQuery, Angular 8.0
- Apache Kafka, IBM MQ
- RESTful, SOAP services development
- Release Management, Problems, Incidents and Requests management boards

- Analyze user stories, design the solution and implement them
- Drive the continuous improvement of CI/CD pipeline
- Continuously improve knowledge, skills and team
- Coach and support team members during sprints
- Manage, continuously improve and monitor our build pipelines and systems
- Every once in a while share the on-call rotation and be an escalation contact for incidents and support

Photon Infotech Pvt. LTD, Software Engineer

Oct 2011– Jul 2013

- Worked in Retail department of Offshore Delivery Center
- Design and developed the User Management Module (UMM) that being used in client applications
- Data model for UMM
- Started and lead UMM
- Built User tracking page for the client
- Integrated cache for product image
- Project release scope definition
- Java development

Orchid Informatics, Software Engineer

Oct 2010– Oct 2011

- Worked in development department
- As offshore team senior developer to understand the current system and make new process/enhancements with no impact on the current system
- Requirement Analysis, High level design, Low level design, Coding, Unit testing with J-Unit, Reviews
- Taking care of Critical Production issues post major releases
- Support and upgrade post deployment
- Design and developed dynamics content flow which helped document approval process more user friendly UI
- Started and lead document approval process
- Java development

Jagtap Infotech Pvt. LTD, Web Developer

Jan 2010– Jul 2010

- Worked in development department
- Built an in-browser Document Viewer
- Research and Integrated payment module
- Documentation of the payment flow
- Component integration test
- Release management
- Java development

Infosoft, Software Engineer

Apr 2009– Oct 2009

- Worked in Relevance team for B2B-C
- Component Integration Test
- Documentation of B2B-C deliverables
- Worked with B2B-C team that handled thousands of invoices and tracking status updates per day
- Release management
- Report generation
- PHP development

PROJECT EXPERIENCE

DEUTSCHE BANK (CGI), SENIOR JAVA DEVELOPER, 10/19 TO till date

The application ETRA, is a new global personal account dealing system for Compliance, replacing a number of legacy Lotus Notes and Excel solutions being used regionally. The employee trade policy sets minimum standards that are designed to ensure that personal investment activities are conducted in accordance with applicable laws, rules and regulations.

At the largest German financial institution, in parallel to working as senior java developer Mr. Ahmednashirwala build and deploy the REST micro web service API that integrated to 3rd party vendor service application.

The main challenge was as a transition phase of the project, we learnt existing modules to minimize the impact of newly deployed micro web services. Addition to the existing development work, Mr. Ahmednashirwala has coach and support 3 junior developer and 1 quality test member to ensure newly developed micro services work as expected.

Among, on the floor we're the first to develop and deployed the micro webservices to docker hub and forward to AWS kubernetes infrastructure.

As an offshore senior java developer to understand the current system and make new process/enhancements with no impact on the current system.

Requirement Analysis, High level design, Low level design, Coding, Unit testing with J-Unit, Reviews. Mentoring team members on JIRA board. Taking care of Critical Production issues post major releases.

Responsible for overall application health from software, compliance related items, Ensures development happens for all Software Components in accordance with Detailed Software Requirements specification, the functional design and the technical design document, Contributes to problem and root cause analysis, verifies integrated software components by unit and integrated software testing according to the software test plan. Supports the creation of Software Product Training Materials, Software Product User Guides, and Software Product Deployment Instructions.

Deutsche Bank (CGI), SENIOR JAVA DEVELOPER, 04/15 to 10/19

The application APS, main business objective is the daily preparation and analysis of the (domestic) Banking Book position for performance measurement and interest rate risk management.

Additionally, APS provides the framework for enabling US GAAP-accounting (IAS39) and for placements of Asset Backed Securities / Credit Derivatives.

This application layered of multiple languages, like Java, C++, Python and Shell script. The application receives millions of rows of flat data from various sources. The first layer developed and configured as cron-job in the Linux is shell script layer, second level developed in the Python, to enable top level file filter and final data filters are developed in the C++ which segregate data according to business rules and creates flat files which are compatible with Oracle sql-loader. The application frontend developed in the Java, where we can track and check status of individual jobs progress and download generated reports via Java application web interface.

The main challenge was to understand each programming language layer and there are various Interest Rate Risk Management & Performance Management reports were developed as individual micro services.

Deutsche Bank (CGI), SENIOR JAVA DEVELOPER 09/13 to 04/15

At the largest German financial institution, Mr. Ahmednashirwala was part of a German commercial banking sub-ledger team responsible for applications migration NSW.

The NSW, application was developed and running on decade old fashion technology, like java applet and business logic developed in the EJB 2.0 version. Since NSW is the application which supports the German commercial banking sub-ledger for controlling purposes.

We have had to migrate applet to latest application track as per Deutsche bank road map.

The main challenge was to understand existing application flow and business logic for each individual modules which generates various reports Like P&B Clients, Global Markets, Global Banking Division and Loan Exposure Management.

We upgraded applet to latest technology as per DB road map, to jsf and angular js.

As an offshore senior java developer to understand the current system and make new process/enhancements with no impact on the current system.

Requirement Analysis, High level design, Low level design, Coding, Unit testing with J-Unit, Reviews. Mentoring team members. Taking care of Critical Production issues post major releases.

Johnson & Johnson (Photon Infotech), 10/11 TO 07/13

Healthy Essentials is a responsive web application that can be viewed on desktop, mobile and tablet like devices. This landing portal serves as product distributor which covers all Johnson & Johnson products brands and distributor list. It has various modules called User profile, Products, Lifestyle, Coupons, and Promotions.

Worked as a senior developer in project and explained about the framework and business to the new joiners in project. The backend is a Java based web application, built on top of custom framework by extending framework components and adding new components, wherever required, used to track and manage the implementation of products modules. Features include a browser-based user interface to streamline business processes, upload process, workflow management to track products from the initial customer contact through to product end completion.

Venda (Orchid Informatics), 10/10 TO 10/11

Venda commerce provides ecommerce and point-of-sale (POS) solutions that help businesses move away from siloed online and in-store channels and seamlessly connect all customer touchpoints. Venda's cloud solution unifies business operations and commerce applications to provide a single source of item, inventory, customer and order data — so you can create seamless, cross-channel, personalized shopping experiences.

B2B Commerce (Jagtap Infotech), 01/10 TO 07/10

B2B was built with the idea that ecommerce is no longer a stand-alone channel but a core business component. SuiteCommerce enables businesses to move from siloed online, in-store and phone shopping channels to an integrated commerce solution that seamlessly connects ecommerce and in-store POS to order management, inventory, merchandising, marketing, financials and customer service. Design and development of a driver system that can configure or tear down any to any connectivity between independent modules.

The Orchard (Infosoft), 04/09 TO 10/09

With global reach across digital, cable TV, and subscription on-demand services, The Orchard brings films and television to screens, big and small. With sales and marketing experience to get the best exposure and a powerful platform, The Orchard's blend of human expertise and innovative tech make it a transparent, unique and forward-thinking company.

Work as a developer on the B2B-C platform. B2B-C is a custom Platform, tailored for enhanced tracking, management and reporting of B2B-C programs. Features include a browser-based user interface to streamline business processes, workflow management to track report initiation to report finalization which contain customer and financial systems and flexible data reporting and extract capabilities

APPLIED TECHNOLOGIES & TOOLS

- Java/J2EE (8.0 +), Spring Boot, Spring MVC, Hibernate, EJB 3.0, JPA
- SOAP webservice, REST microservice (Hystrix, Eureka)
- Docker, kubernetes, AWS
- jQuery, Angular 8.0
- Apache Kafka, IBM MQ
- Linux, Shell Script
- SQL/PLSQL
- Tomcat, WebLogic, WebSphere
- Oracle, DB2, MySql
- Artifactory, Nexus, Git
- Scrum, Atlassian-Stack – Jira, Confluence,
- BitBucket, JFrog Artifactory
