Objectives

I am a Senior Front-end developer, Graduated in Information Technology, over 10+ years of experience with a strong commitment to developing innovative solutions, adhering to coding best practices, and maintaining a high standard of technical excellence. With a solid foundation in JavaScript, React and Restful APIs, I am well-prepared to tackle challenging scaling problems and contribute to the growth. I thrive in a collaborative, cross-functional team setting and am dedicated to mentoring junior team members.

WORK EXPERIENCE

Senior UI Consultant
NTT DATA, LONDON, UK -- August 2022 - Present

- My main focus is on coordinating with all teams and providing support to deliver quality high performance react applications using **React**, **Redux**, **GraphQL** and **Apollo Server**.
- Working as **Senior React developer** for Client, SKY UK, project.
- I am responding to the emergence of practices and technologies by developing appropriate technical standards.
- I also transforming **Figma** designs into prototypes allowing stakeholders to visualize and understand the potential impact of the full-scale application.
- Following practices and coding standards I contributed to scalable codebase.
- As a Lead Front End developer working in a **SAFe methodology**, encouraging team collaboration in solving challenging problems and kept the team motivated.
- I made sure that all business acceptance criteria were covered by writing **unit test cases (React Testing Library and JEST)** to ensure delivery commitment.
- Additionally, I am identifying points of failure, within the teams (Squads) and working towards resolving them.

Architect UI
COGNIZANT TECHNOLOGIES SOLUTIONS (August/2016 — July/2022)

- Worked as both an **Acting Project Manager** and a **Lead React developer** for Ford Moneys UK lightning team at Cognizant.
- In my role I am not only individual contributor but also managed a UI team at an offshore center.
- I provided guidance on issues identified opportunities for process optimization and played a role in implementing proposed solutions.
- Additionally, I conducted code reviews. Improved existing codebases while introducing new features.
- I also collaborated with others on UX designs reviewing specifications and using them to design, code, test and document programs or scripts of medium, to complexity according to the appropriate standards and tools.
- I followed coding standards provided suggestions for improvements and reviewed merge requests from my team.
- I developed the **front-end architecture** to support user interface concepts on devices such as tablets and mobile phones.
- I collaborated with functional teams to prioritize activities and ensure successful delivery.

Senior UI Team Lead

*PERSISTANT SYSTEM LTD, India (*Nov/2015 – August/2016)

- I was UI Lead for **CISCO module**.
- I created designs that prioritize usability and adhere, to **SEO** and **web standards**.
- I incorporated testability and diagnostic features into the application fixing bugs with the assistance of architecture.
- I developed UI components and independent functions that can easily be integrated into other pages in CISCO app.
- I provided technical guidance on matters.
- I contributed to **UX designs** collaborating with others as needed to review specifications. These agreed upon specifications were then used to design, code, test and document programs or scripts of medium, to complexity following the standards and tools.
- Manage UI team and keep track of UI work.

Manager UI Level-1

*TIMES INTERNET LTD, India (*Oct/2012 – Sep/2015)

- I worked as the **Lead UI Developer** for the **ETPortfolio** web app.
- My responsibilities include designing the front-end code using **JavaScript, jQuery, HTML and Bootstrap** to ensure an user experience across desktop, tablets and mobile devices.
- I also involve in troubleshooting complex issues identifying problems and conducting root cause analysis on the UI app.
- As part of my ownership of modules I had a deep understanding of the workflow and actively participated in code reviews and refactoring to improve code quality while implementing new features.
- Additionally, I played a role in establishing the **front-end architecture** to support an intuitive user interface.
